Haico Treadmill

Haico Treadmill

Haico Treadmill selection consists of three standard models. Haico Treadmill 4000 and 5000 are high-speed treadmills and Haico Treadmill 3000 is for a slow-speed training.

All the three Haico Treadmill models offer You the following advantages:

- **Running surface:** Scientifically researched nature like running surface corresponds with turf - no damages with horse's legs.

- **Structure:** Low running surface allows quick and cheap installation to the floor level.

- **Comfort:** Compact silent structure. Vibration absorbers. Fantastic dung guiding out of the belt - easy to keep clean. No regular service needed - just use and clean.

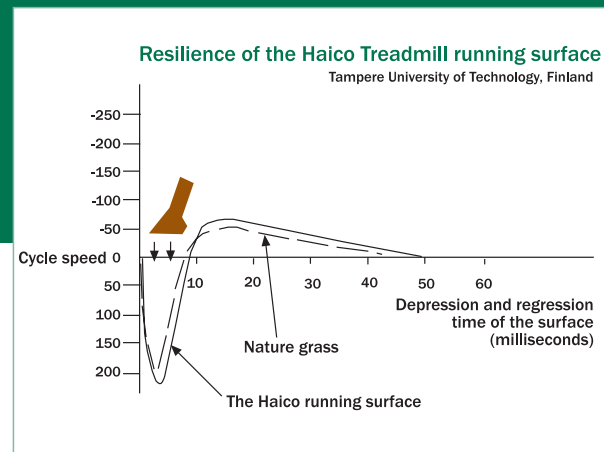

- **Performance:** Service free low-friction belt. Ready for use weight unit inside the frame - only connect to the safety harness and use. Automatic contrary wind blower follows the speed of the belt. Automatic programmable tests.

- **Safety for the horse:** Adjustable width of the rails - prevents dangerous situations.

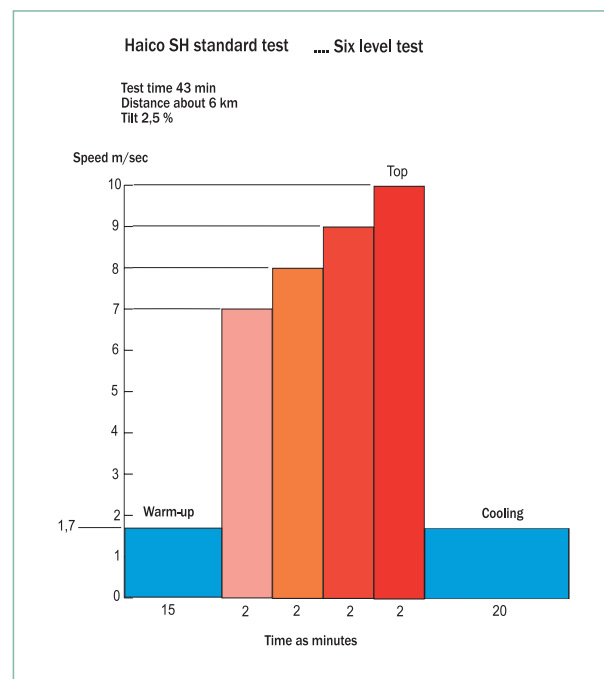

- **Installation:** Half a day

- **Finishing:** High quality and neat appearance

- **Warranty:** 2 years, the frame 5 years.

Researched has established that a very high similarity exists between the surfaces found in nature grass and that of the Haico treadmill. The naturelike surface doesn't strain the horses legs even in strenuous training.

Standard test is useful. Making exactly the same test it is possible to follow changes in condition of a same horse and variances between different horses.

Compact and modern set of equipment for training, testing and rehabilitation.

Pulling belts are connected to the safety harness and the pulling force can be steplesly adjusted between 0 to 85 kg (850N) manually or automatically via the test programs.

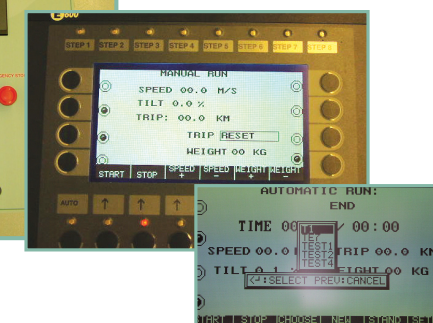

At the same time with weight unit can be selected uphill between 0 to 10% manually or automatically several different angles via the test programs.

Contrary wind blower with automatic wind from 0 to 16 m/sec.

Clear and logical control unit. Standard / individual test program enables comparable test results between horses.

Ramps for both ends. The front ramp can be used as a stay ramp.

Safety harness and weight unit belts. Reliable and easy to use.
